PROJECT TITLE: GIFT HIDDEN GAME

SECTION: KM083

NAME: ASHISH KUMAR

REG NO: 12004718

SUPERVISED BY: DR. BALJIT SINGH SAINI

SUBMISSION DATE: 28/10/2022

QUESTION

The game hides three gifts (at random each time the game is loaded). Your task is to find the gifts.

Goal: Find the gifts in the fewest number of guesses. The game rates you according to your performance.

Setup: When the game is loaded, the gifts are hidden at random by the computer on the grid. Then the game asks you for your first guess.

How you play: The game will prompt for a guess, and you will type in the box as shown above and press “Guess” button. In response to your guess, you will either see the “Gift” or “Miss” in the corresponding grid location (refer figure above). When you find all the gifts, the game ends by displaying your rating. In case you find the danger icon (only one such icon is hidden in the grid, at random) the game will reset and all progress is lost.

The game will have three levels: 3x3 grid, 4x4 grid, and 6x6 grid.

ABOUT PROJECT

There are three levels in this game that involves finding gifts. Finding the gifts that have been randomly placed throughout the grid is the game's main objective. You must locate every gift, and based on how well you do, you will be awarded stars. There are two methods for playing the game. One requires you to click through each grid and check, while the other requires you to enter by row and column number. Your game will be reset if you choose a grid with a card that has danger behind it.
